

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-17 (canceled).

Claim 18 (new): A display device for displaying symbols in a player-operable entertainment machine comprising at least one movable member having a symbol-bearing support, and a signal-generating device characterised in that the support is a signal-actuable support whereby the symbols are produced on said support by supply of signals thereto from said signal-generating device.

Claim 19 (new): A display device according to claim 18 characterised in that the movable member is movable relative to the support, and the signal-generating device is operable to produce a moving symbol display on the support.

Claim 20 (new): A display device for a player-operable entertainment machine comprising at least one movable member arranged to bear symbols for display on the machine, and a signal-generating device, characterised by the provision of a signal-actuable support mounted alongside said member so that the member is movable relative to the support and the symbols are arranged to be produced on said support in a sequence moving in correspondence with movement of the member by supply of signals to the support from the signal-generating device.

Claim 21 (new): A display device according to claim 18 characterised in that the support is movable with the movable member.

Claim 22 (new): A display device according to claim 18 characterised in that the movable member is a rotatable member.

Claim 23 (new): A display device according to claim 22 characterised in that the rotatable member is an axially rotatable reel, and the support is in the form of a strip mounted in a curved path relative to at least a part of an outer peripheral structure of the reel so as to face radially outwardly therefrom.

Claim 24 (new): A display device according to claim 23, characterised in that the strip extends around part only of the peripheral structure.

Claim 25 (new): A display device according to claim 24 wherein the peripheral structure is open whereby the strip is visible therethrough.

Claim 26 (new): A display device for a player-operable entertainment machine comprising a signal-actuable support, and a signal-generating device, characterised in that the support is shaped to conform to a simulated path of movement and the symbols are arranged to be produced on said support in a sequence moving along said path by supply of signals to the support from the signal-generating device.

Claim 27 (new): A display device according to claim 18 characterised in that the support comprises an LCD substrate and said symbols comprise digital signals.

Claim 28 (new): A display device according to claim 18 characterised in that the signal-generating device is operable to produce and maintain said signals thereby to establish and maintain said symbols.

Claim 29 (new): A display device according to claim 18 characterised in that the signal-generating device is operable to produce said signals thereby to establish said symbols, the support being operative to retain established symbols.

Claim 30 (new): A display device according to claim 18 characterised in that the signal-generating device is operable in a plurality of modes corresponding respectively to a plurality of different symbol ranges.

Claim 31 (new): A device according to claim 18 characterised in that the support is back illuminated with an illumination device.

Claim 32 (new): A device according to claim 18 characterised in that the symbols on the support comprise pictorial representations of fruit.

Claim 33 (new): A player-operable coin-operated entertainment machine of the kind having a main display device for displaying a combination of symbols at a win zone, said device comprising a plurality of side-by-side symbol-bearing reels rotatable about a common horizontal axis within a housing behind a window at the win zone, characterised in that said main display device is the display device of claim 18.

Claim 34 (new): A player-operable coin-operated entertainment machine of the kind having a main display device for displaying a combination of symbols at a win zone, and an auxiliary display device for displaying one or more symbols in relation to a supplementary game feature characterised in that said auxiliary display device is the device of claim 18.
